INTRO

INTRO

“Web Components are a set of standards currently being produced by Google engineers as a W3C specification that allow for the creation of reusable widgets or components in web documents and web applications. The intention behind them is to bring component-based software engineering to the World Wide Web. The components model allows for encapsulation and interoperability of individual HTML elements.”

Wikipedia

INTRO

- New W3C Standard
- Allows reuse of components
- The standard is divided into four specifications:
 - Templates
 - Shadow DOM
 - Custom Elements
 - Imports
- A Web Component uses well-known technologies:
 - HTML
 - CSS
 - JavaScript
- No need of a framework or library
 - Except an optional polyfill to support older browsers

SPECIFICATIONS

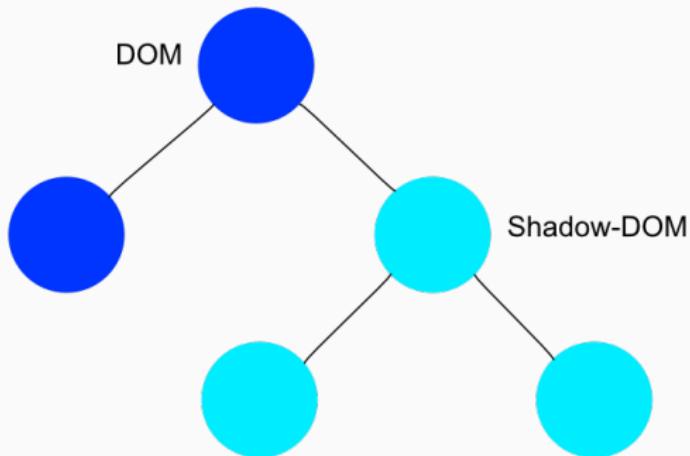

TEMPLATES

- Defines HTML parts to be reused any number of times
- Define reusable parts directly inside of HTML documents
- Is defined by the new <template> tag
- Can be added to the DOM using JavaScript
- Unlimited number of templates possible

```
1 <template id="my-template">
2     <div>
3         
4     </div>
5 </template>
```

SHADOW DOM

- Create an independent sub-DOM
- Not accessible from “outside” of the sub-DOM
- Avoids DOM collisions between components
- No side-effects of CSS or JavaScript between components
- Can be added to the DOM using JavaScript
- Unlimited number of Shadow DOMs possible

CUSTOM ELEMENTS

- Connect template and shadow DOM
- Define reusable components
- Create own tags to produce readable HTML
 - own tags need to include a hyphen
- Apply styles inside of the custom element
- Use JavaScript for interaction
- Throws lifecycle events:
 - created, ready, attached, detached, attributeChanged

```
1 <google-hangout-button />
```

Start a Hangout

IMPORTS

- Outsourcing of HTML parts
- Create own HTML files for components (higher reusability)
- Add components to HTML documents using imports

```
1 <link rel="import" href="google-chart.html">  
2 <google-chart type="column" data="chart.json" />
```

GOODIES

CSS VARIABLES

```
1 :root {  
2     --main-text-color: grey;  
3 }  
4  
5 p {  
6     color: var(--main-text-color, black);  
7 }
```

CSS MIXINS

```
1 :root {  
2     --form-styles: {  
3         border: 1px dotted grey;  
4         font-size: 0.8em;  
5         margin: 1.2em;  
6     }  
7 }  
8  
9 form {  
10     @apply(--form-styles);  
11 }
```

STATUS

STATUS

	Chrome	Opera	Firfox	Safari	IE/Edge
Templates	✓	✓	✓	✓	✓
Shadow DOM	✓	✓	⚠	⚠	⚠
Custom Elements	✓	✓	⚠	⚠	⚠
Imports	✓	✓	⚠	✗	✗

Polyfills

- 1 `bower install webcomponentsjs`
- 2 `npm install webcomponents.js`

Libraries

- Polymer
- X-Tag
- Bosonic

LIVE CODING

SCREENSHOT OF DEMO APPLICATION

Server Dashboard

The screenshot shows a web browser window titled "Server Dashboard" at the URL "localhost:8080". The dashboard displays nine planetary nodes arranged in two rows of four and one row of three. Each node is represented by a planet's image and its name, followed by its IP address and four performance metrics: CPU, Memory, and Disk (each shown as a green progress bar).

Node	IP Address	CPU	Memory	Disk
Merkur	192.168.192.101	[Green Bar]	[Green Bar]	[Green Bar]
Venus	192.168.192.102	[Green Bar]	[Green Bar]	[Green Bar]
Erde	192.168.192.103	[Green Bar]	[Green Bar]	[Green Bar]
Mars	192.168.192.104	[Green Bar]	[Green Bar]	[Green Bar]
Jupiter	192.168.192.105	[Green Bar]	[Green Bar]	[Green Bar]
Uranus	192.168.192.106	[Green Bar]	[Green Bar]	[Green Bar]
Neptun	192.168.192.107	[Green Bar]	[Green Bar]	[Green Bar]

COMPONENT STRUCTURE OF DEMO APPLICATION

WRAP-UP

CONCLUSION

Web Components...

- are **declarative** and reuseable
- are **combinable** and extensible
- are **interoperational** – DOM = common denominator
- allow **encapsulation** – scoping
- increase **productivity** and **accessibility**
- are **standard**
- support **thinking in components**

THE END
